

October 22, 2013

SAN TAN WEST Area Drainage Master Study Public Meeting

Burke Lokey, P.E., CFM
Project Manager

Agenda

- Introductions
- Regional Planning Study & Model
- Flood Hazard Assessment
- Identified Flooding Issues
- Future Efforts

Context

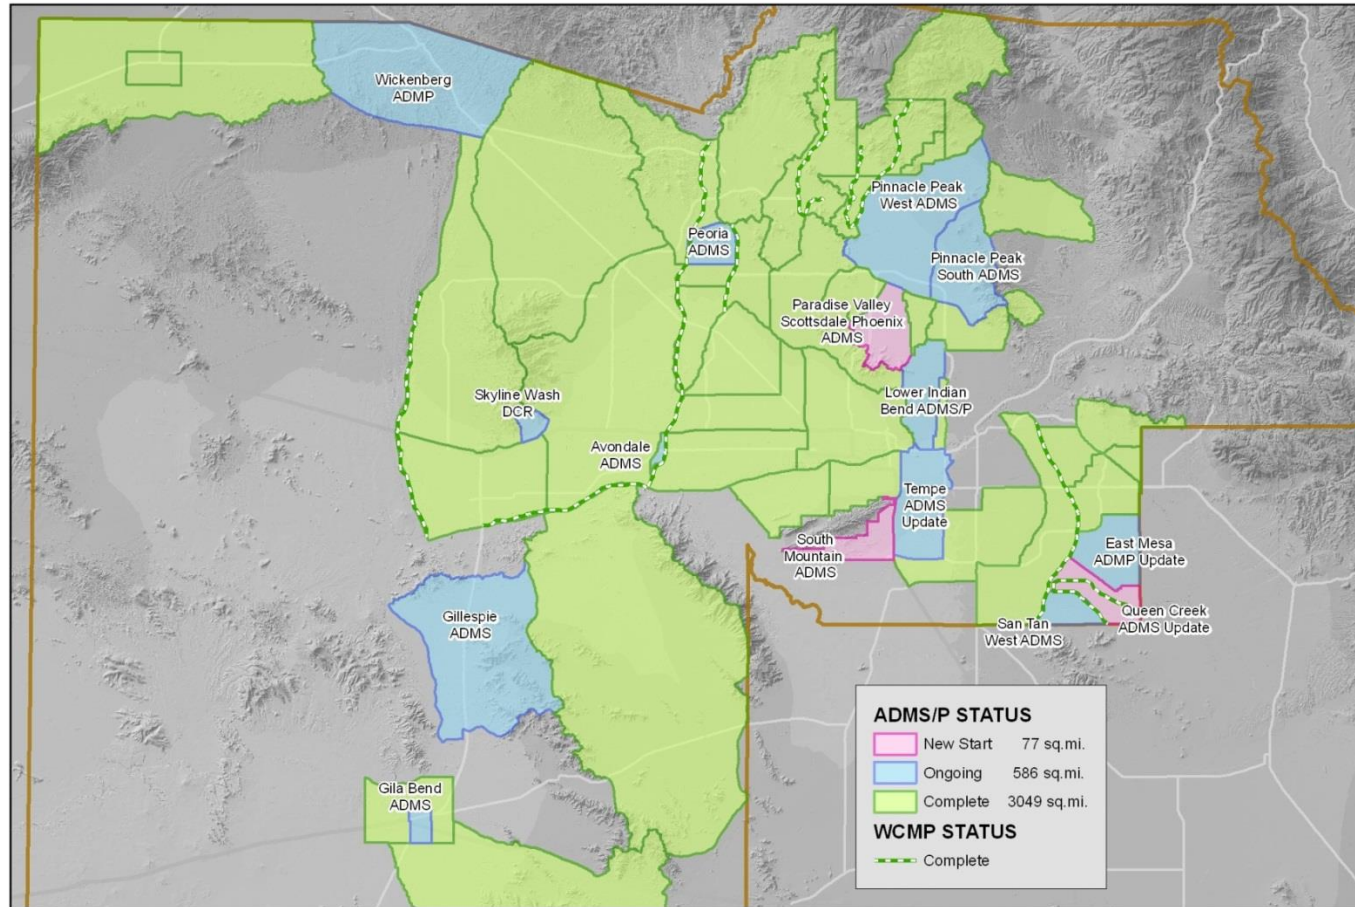

What is an ADMS?

- ID existing problems (July 2012 flooding)
- Develop regional hydrology models (understand and quantify known issues)
- Provide guidance for future development
- Look for possible solutions to flooding
- ID potential cost share partners (Gilbert, Queen Creek, Pinal County, and the Gila River Indian Community)

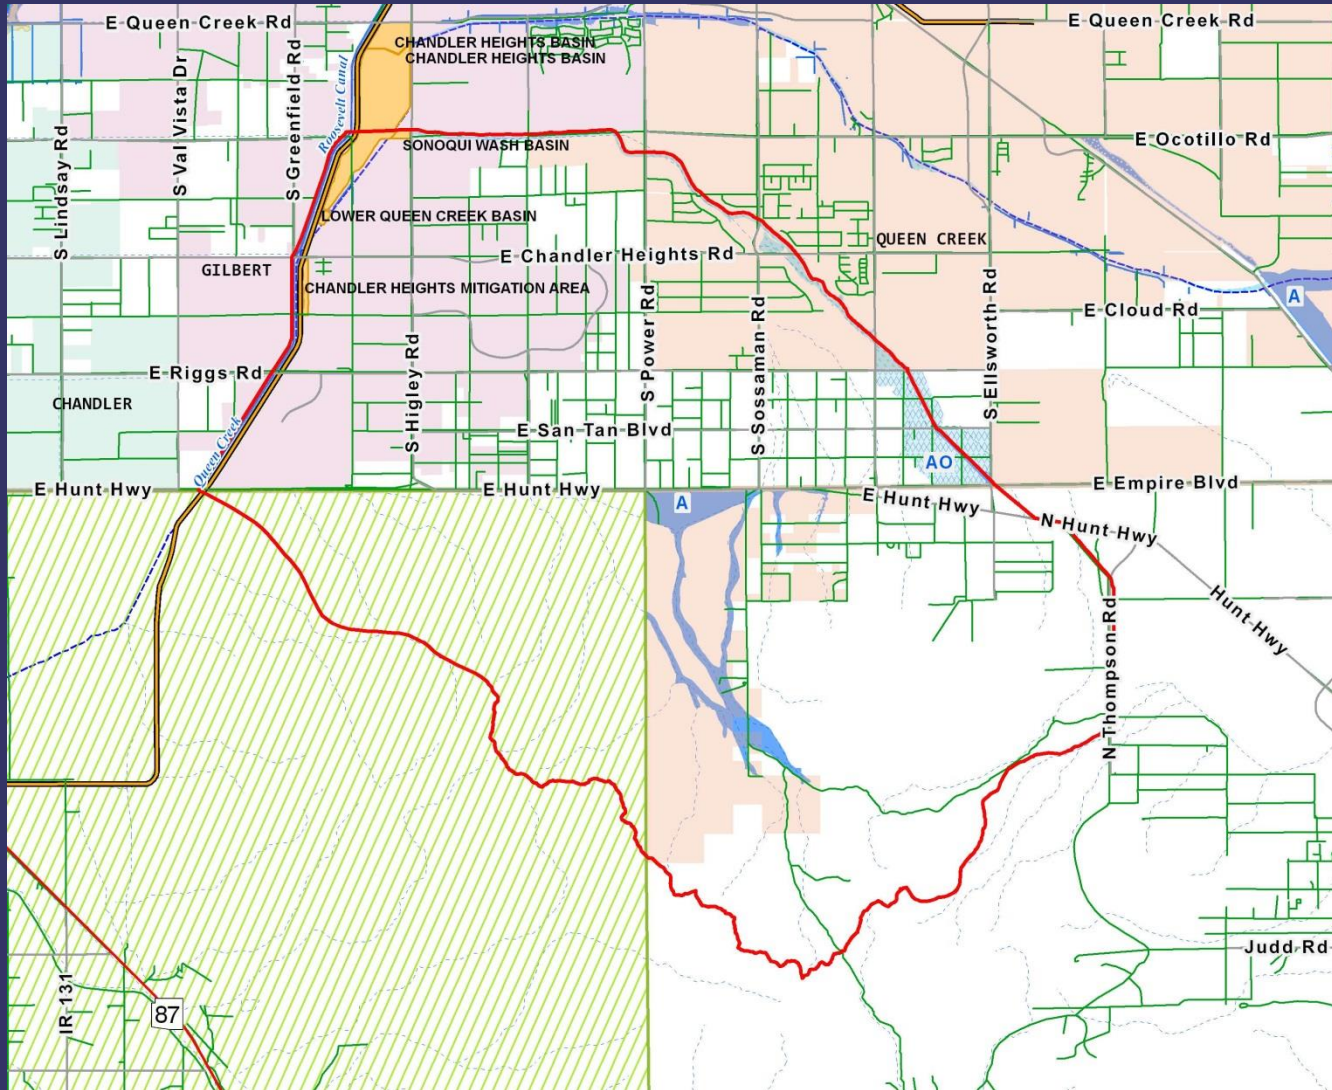

FCD Planning Studies

PLANNING STUDIES FY 2013/2014

San Tan West ADMS

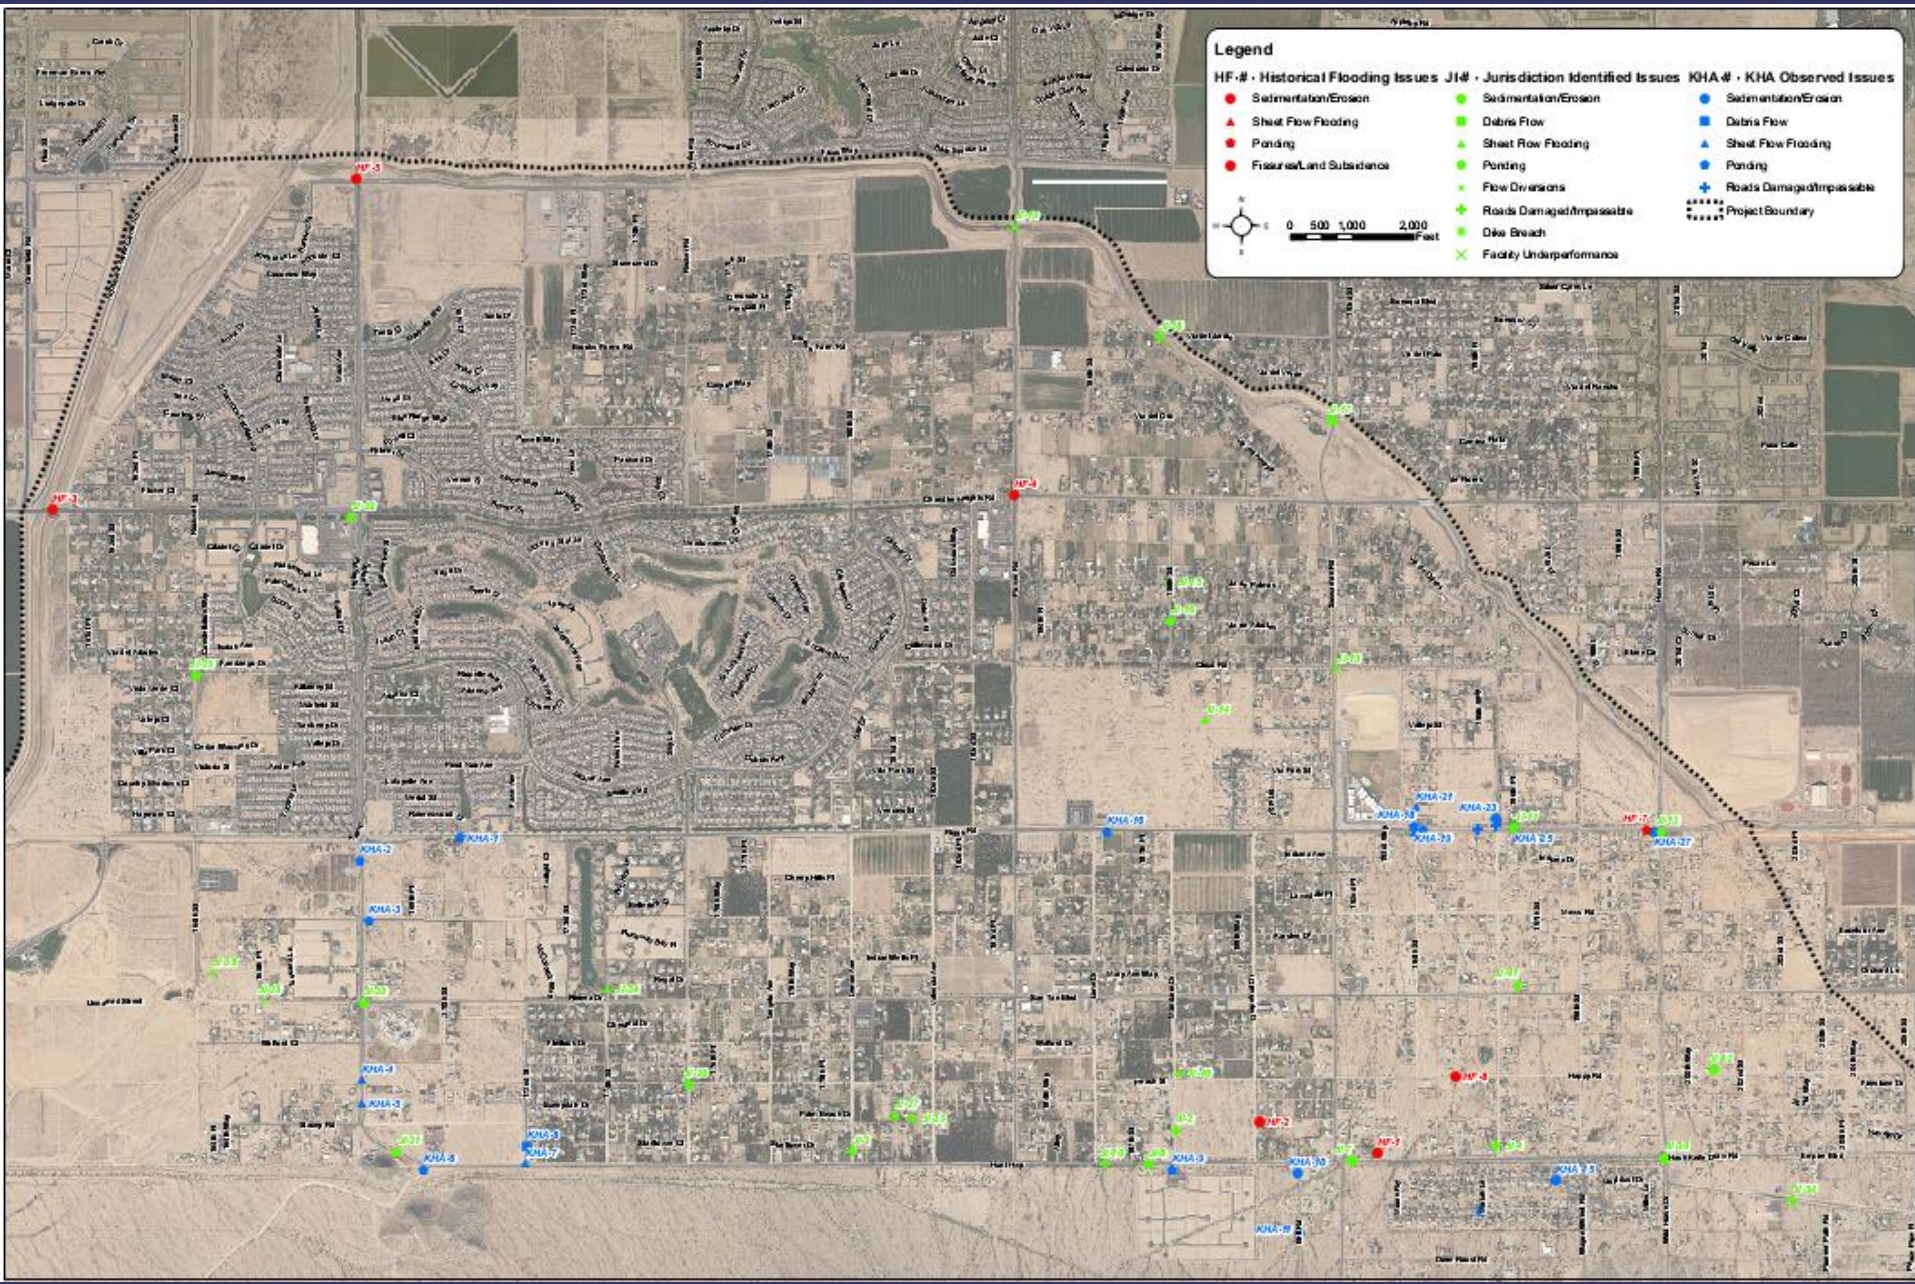

Study Goals

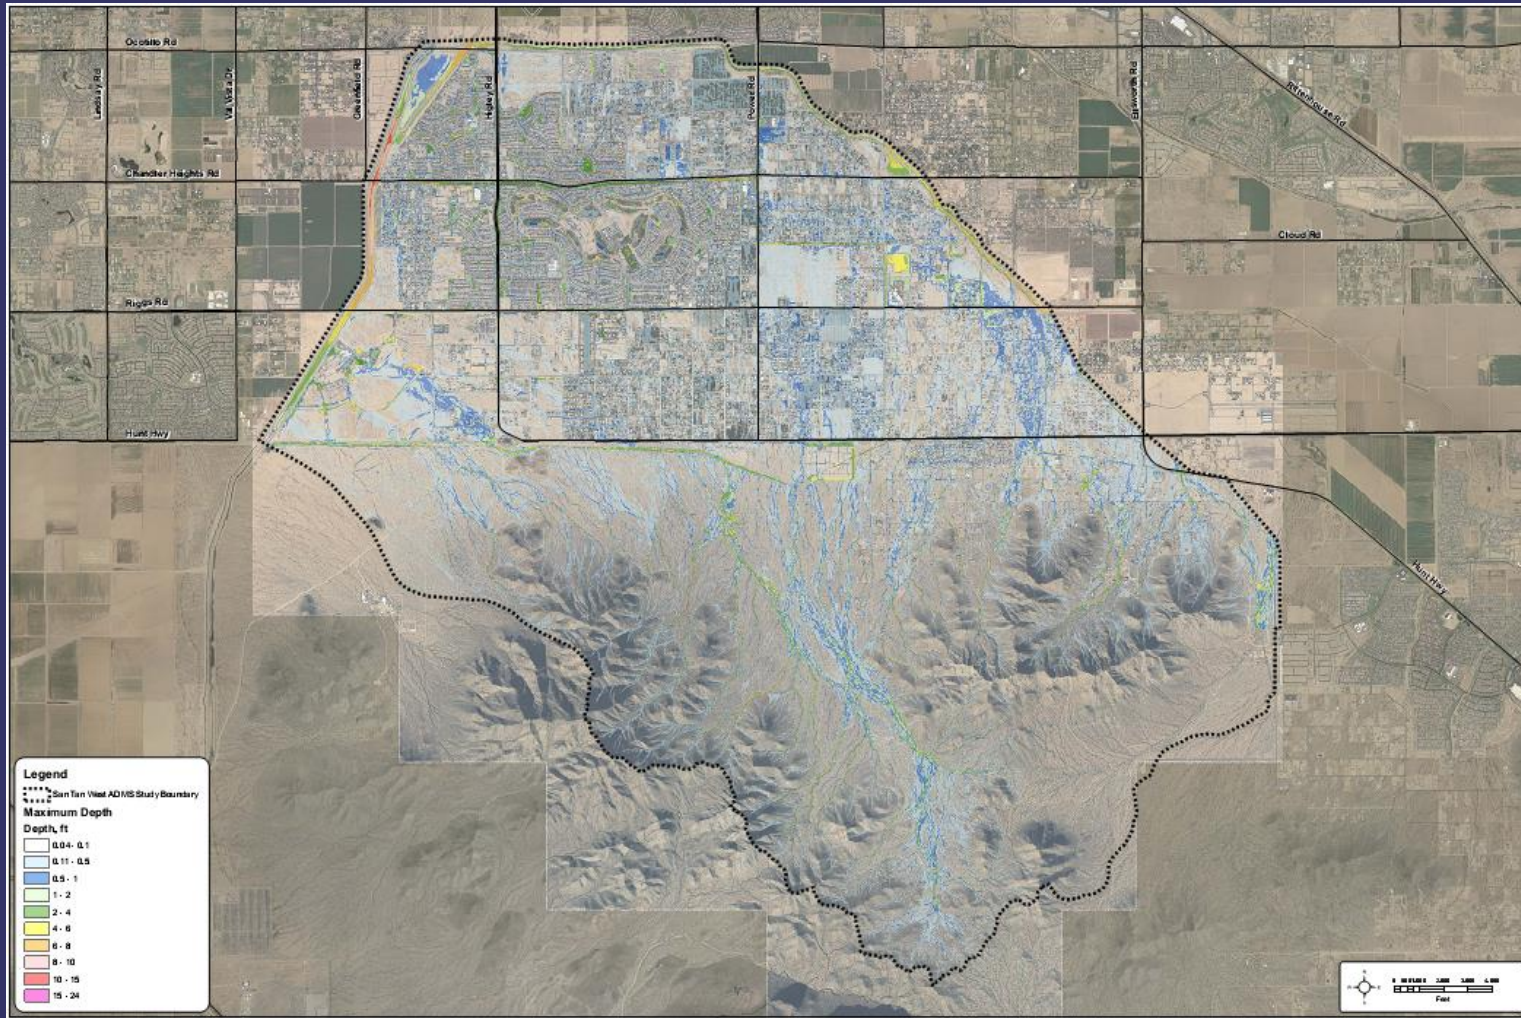

- Develop a Regional Model (FLO-2D) and provide a comprehensive Flood Hazard Assessment
- Identify & evaluate known drainage & flooding problems – look for feasible solutions
- Create new floodplain maps for the EMF ponding areas

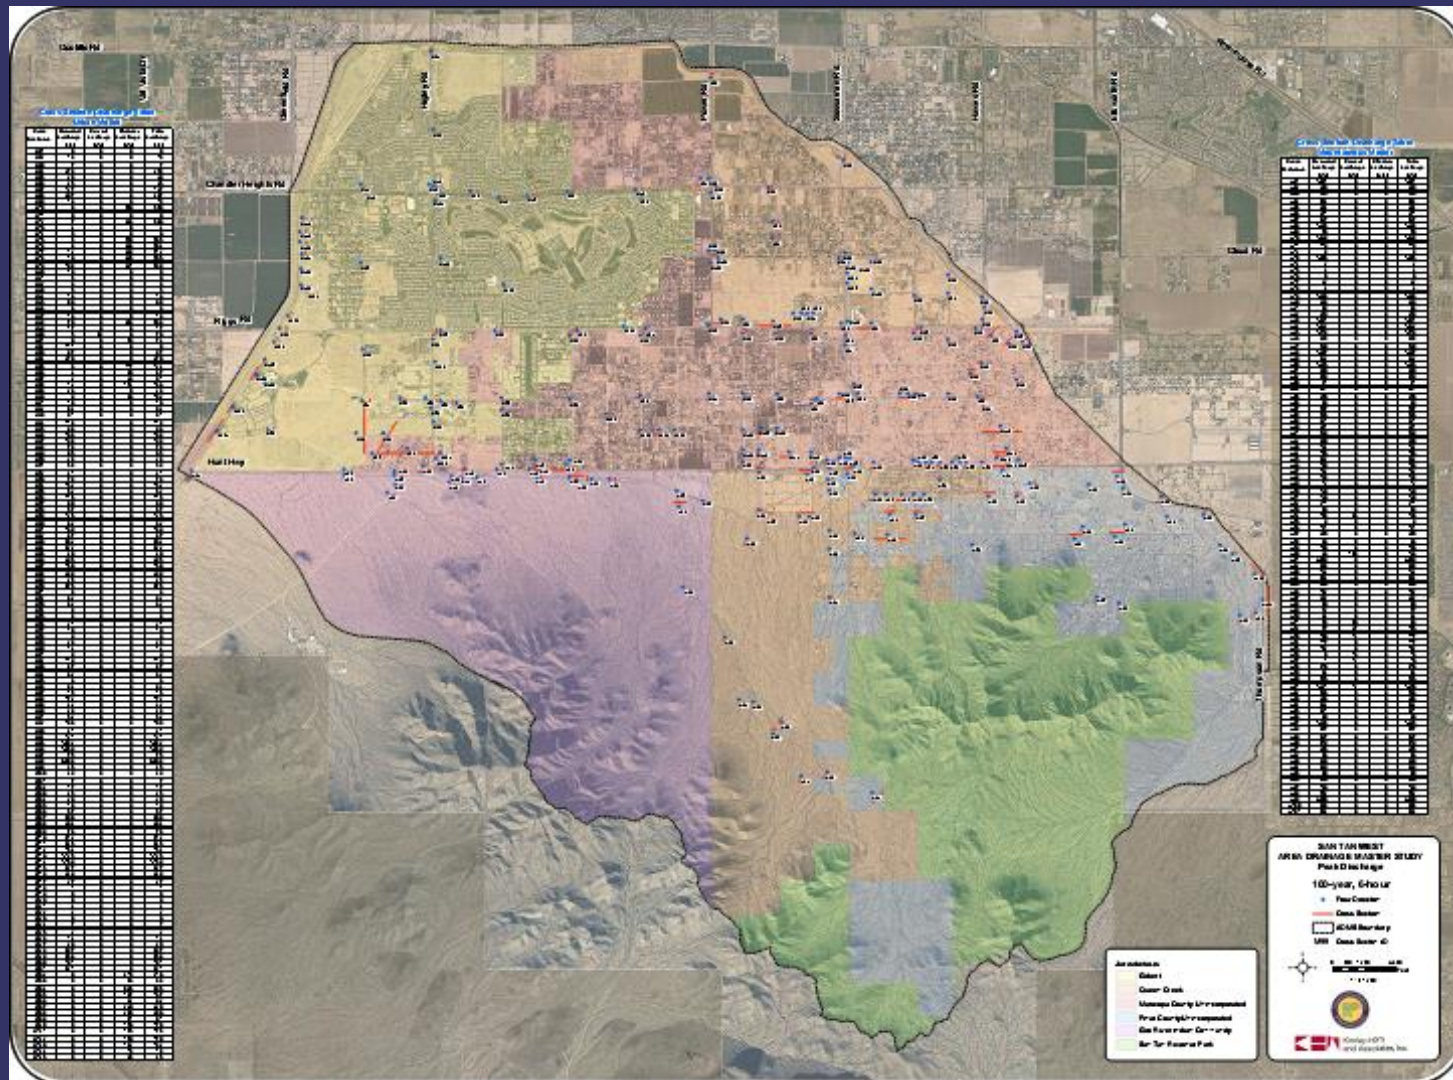

ID Flooding Problems

Regional Hydrology Model-Depths

Regional Hydrology Model-Peak Qs

This map displays the San Gabriel River project area, including channels, floodplains, and structures. The map is overlaid with a grid and includes a legend in the top right corner. The legend defines the following symbols:

- Urban Hydraulic Structure (Red star)
- Mountain Hydraulic Structure (Blue star)
- Channel (Blue line)
- Urban Floodplain Cross Section (Pink line)
- Mountain Floodplain Cross Section (Yellow line)
- Farmers' Dike (Brown line)
- Project Boundary (Dashed black line)

The map shows the San Gabriel River flowing through the area, with various channels and floodplains identified. Key features include the San Gabriel River, the San Gabriel River Channel, the San Gabriel River Floodplain, and the San Gabriel River Farmers' Dike. The map also shows the locations of various structures, including urban and mountain hydraulic structures. The map is overlaid with a grid and includes a legend in the top right corner. The legend defines the following symbols:

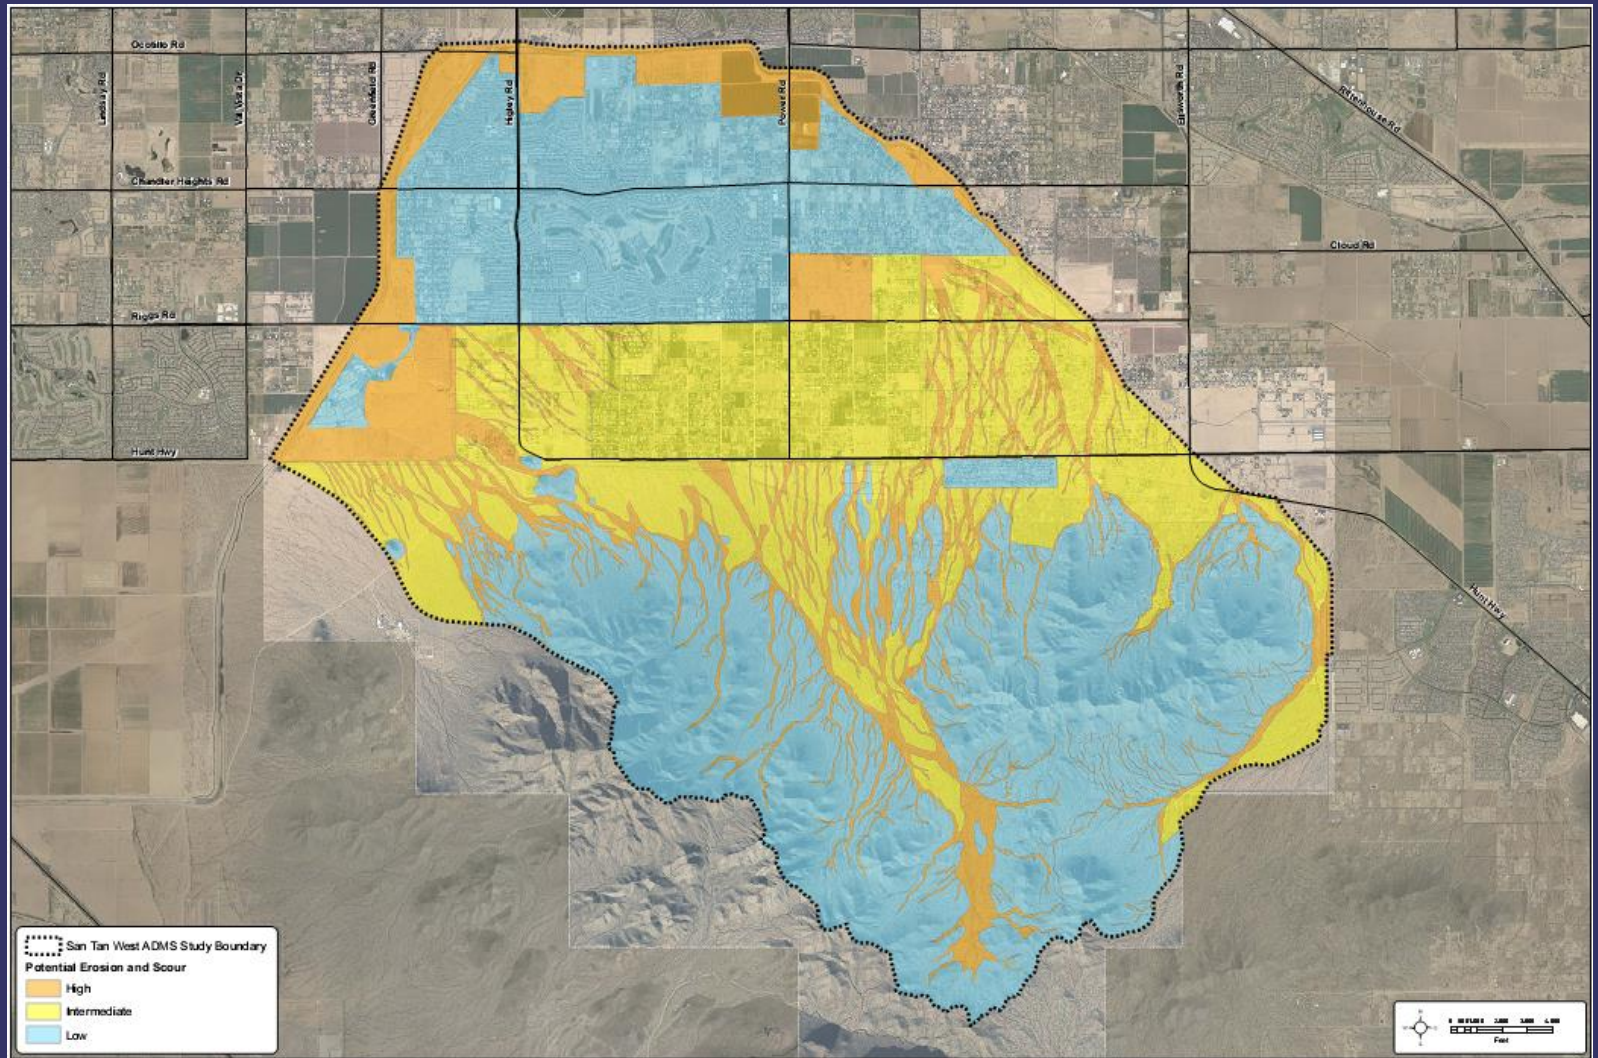

- Urban Hydraulic Structure (Red star)
- Mountain Hydraulic Structure (Blue star)
- Channel (Blue line)
- Urban Floodplain Cross Section (Pink line)
- Mountain Floodplain Cross Section (Yellow line)
- Farmers' Dike (Brown line)
- Project Boundary (Dashed black line)

The map shows the San Gabriel River flowing through the area, with various channels and floodplains identified. Key features include the San Gabriel River, the San Gabriel River Channel, the San Gabriel River Floodplain, and the San Gabriel River Farmers' Dike. The map also shows the locations of various structures, including urban and mountain hydraulic structures. The map is overlaid with a grid and includes a legend in the top right corner. The legend defines the following symbols:

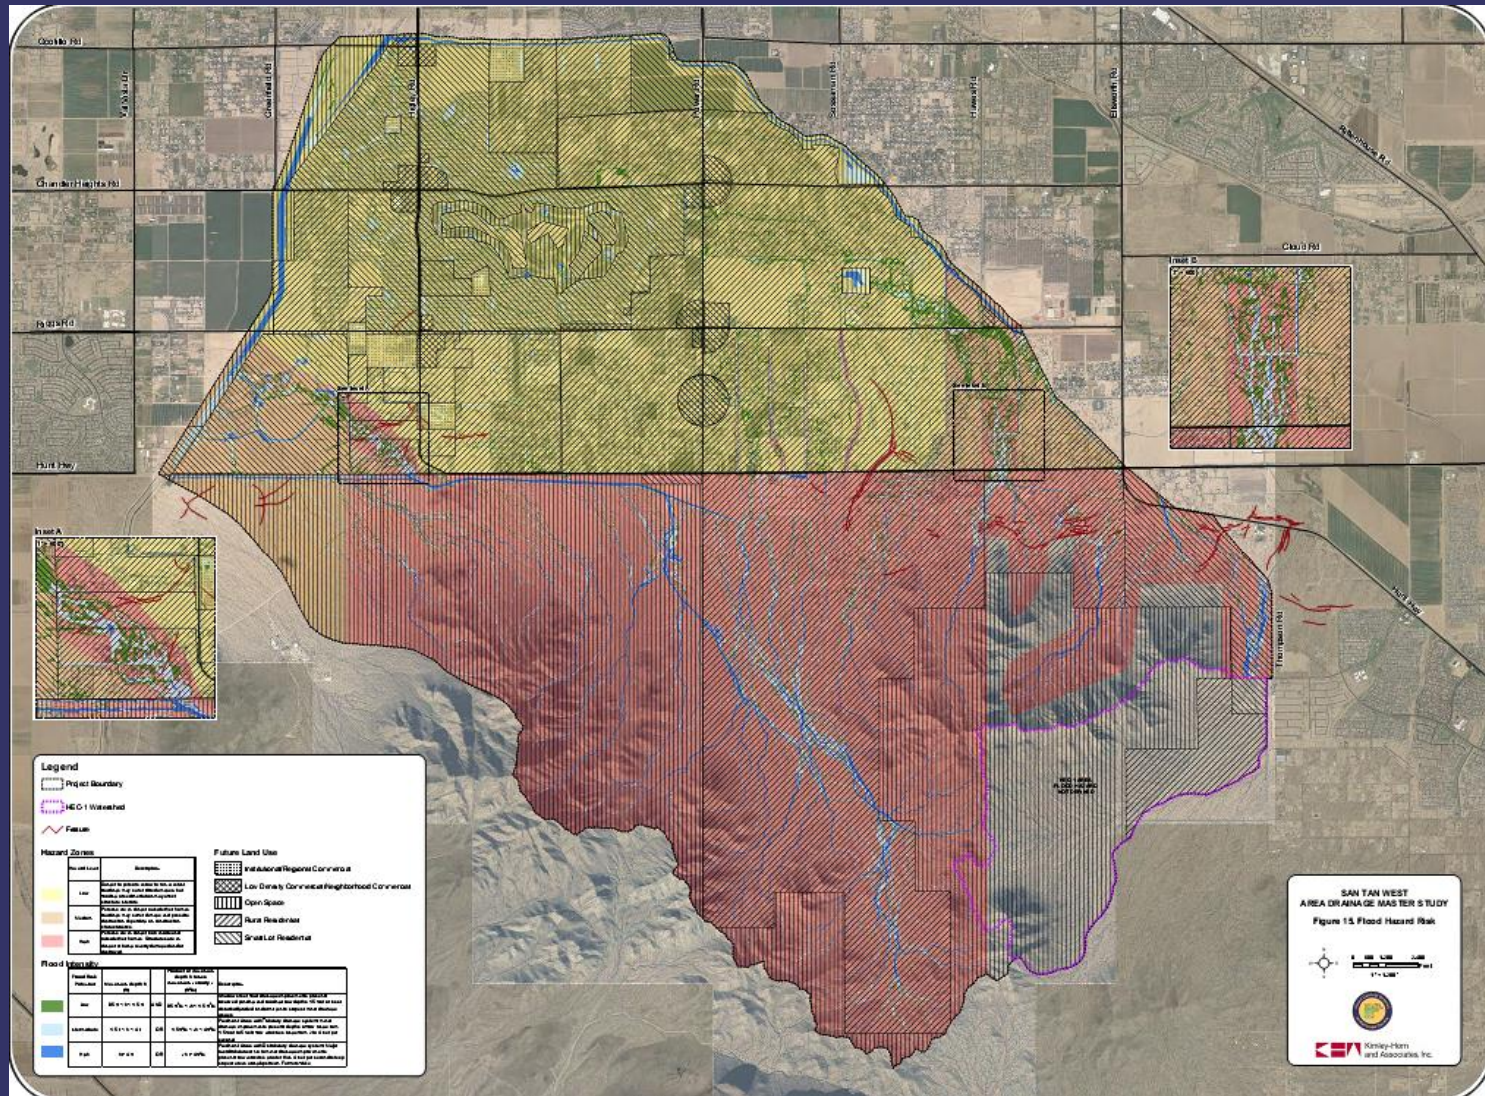

- Urban Hydraulic Structure (Red star)
- Mountain Hydraulic Structure (Blue star)
- Channel (Blue line)
- Urban Floodplain Cross Section (Pink line)
- Mountain Floodplain Cross Section (Yellow line)
- Farmers' Dike (Brown line)
- Project Boundary (Dashed black line)

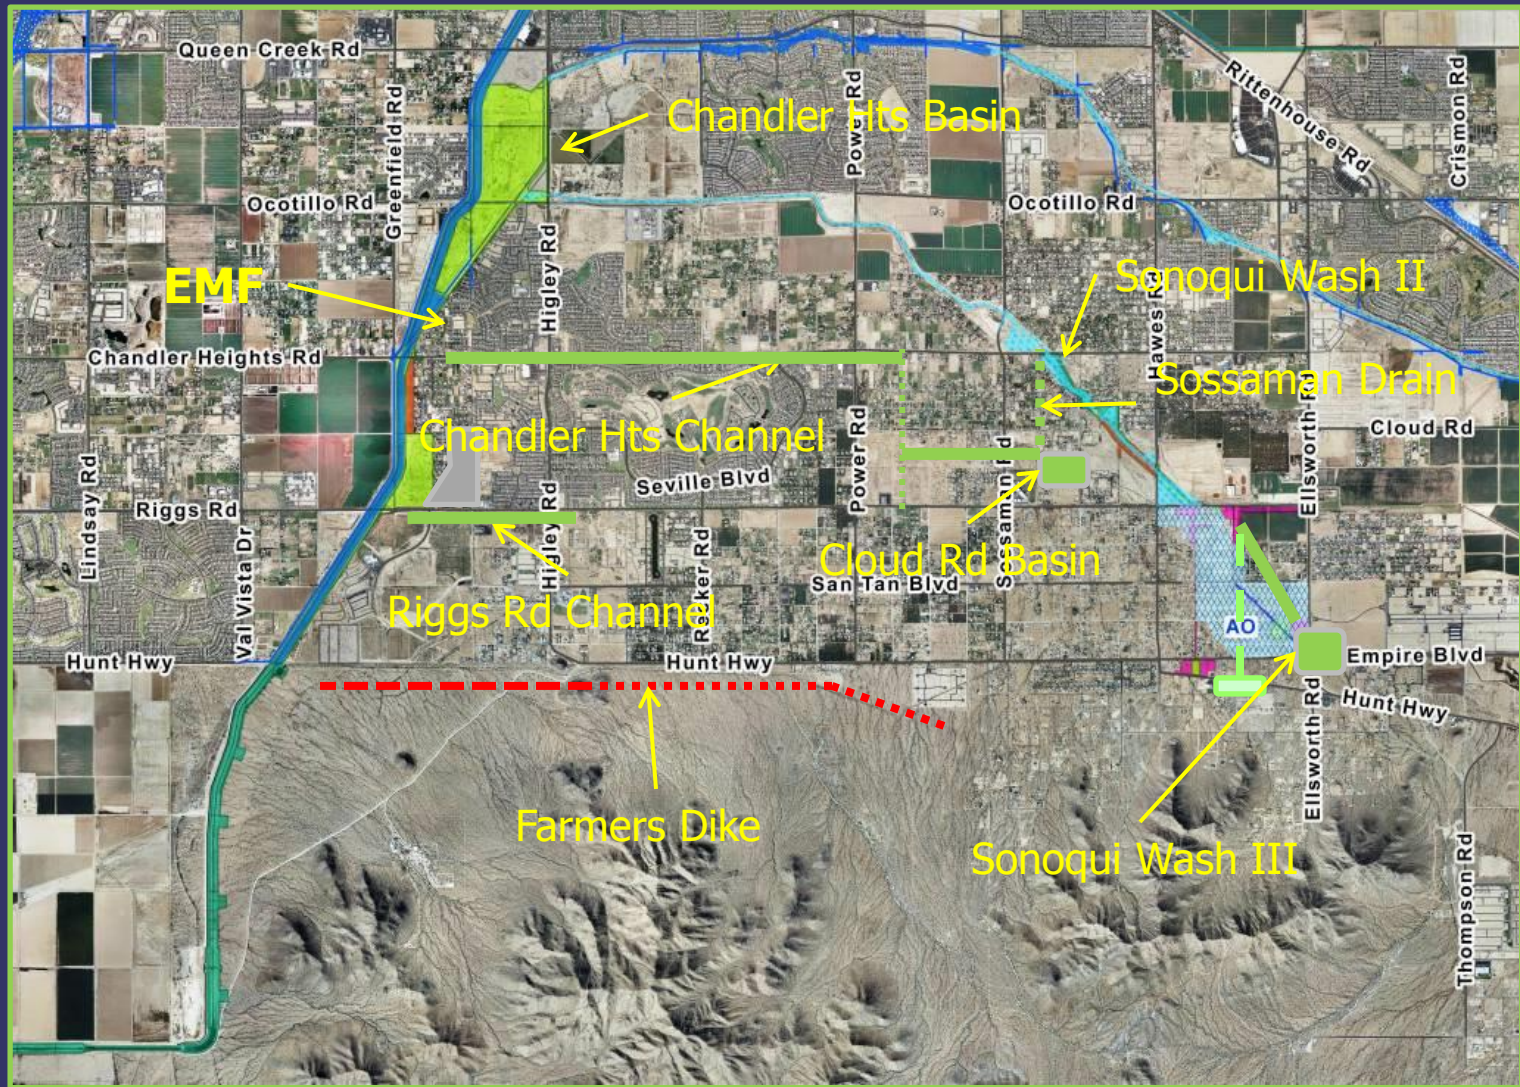

Regional Hydrology Model-Sediment

Flood Hazard Assessment

Existing Drainage Features

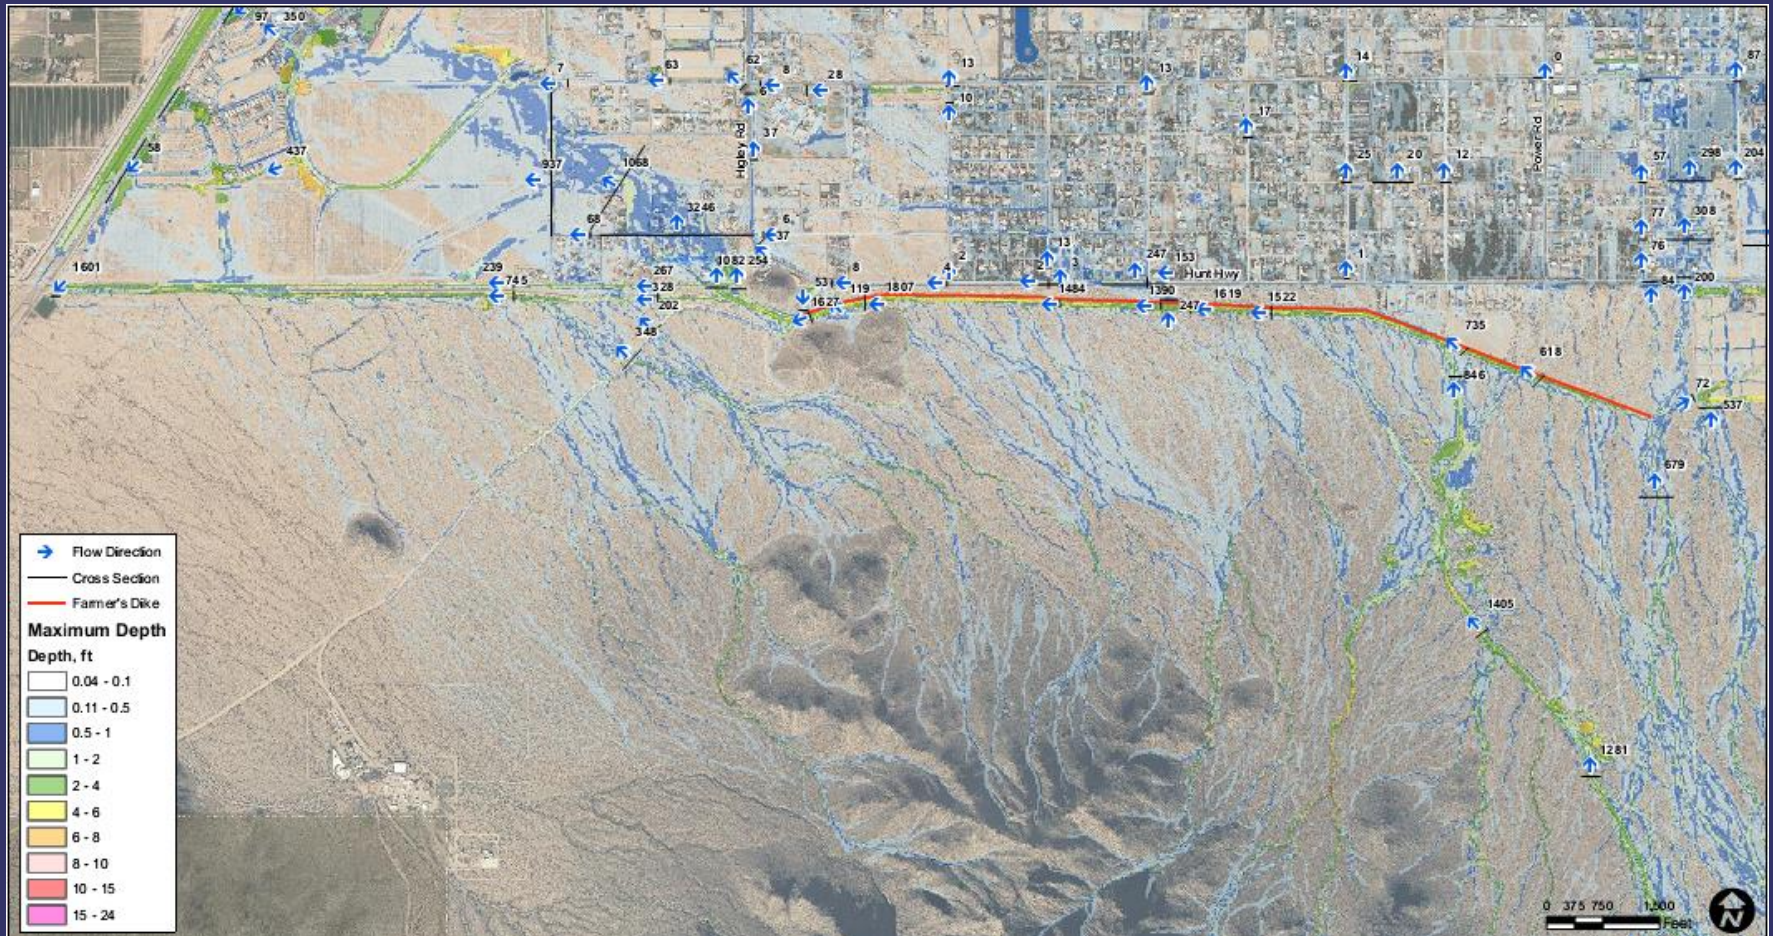

Potential Mitigation Areas

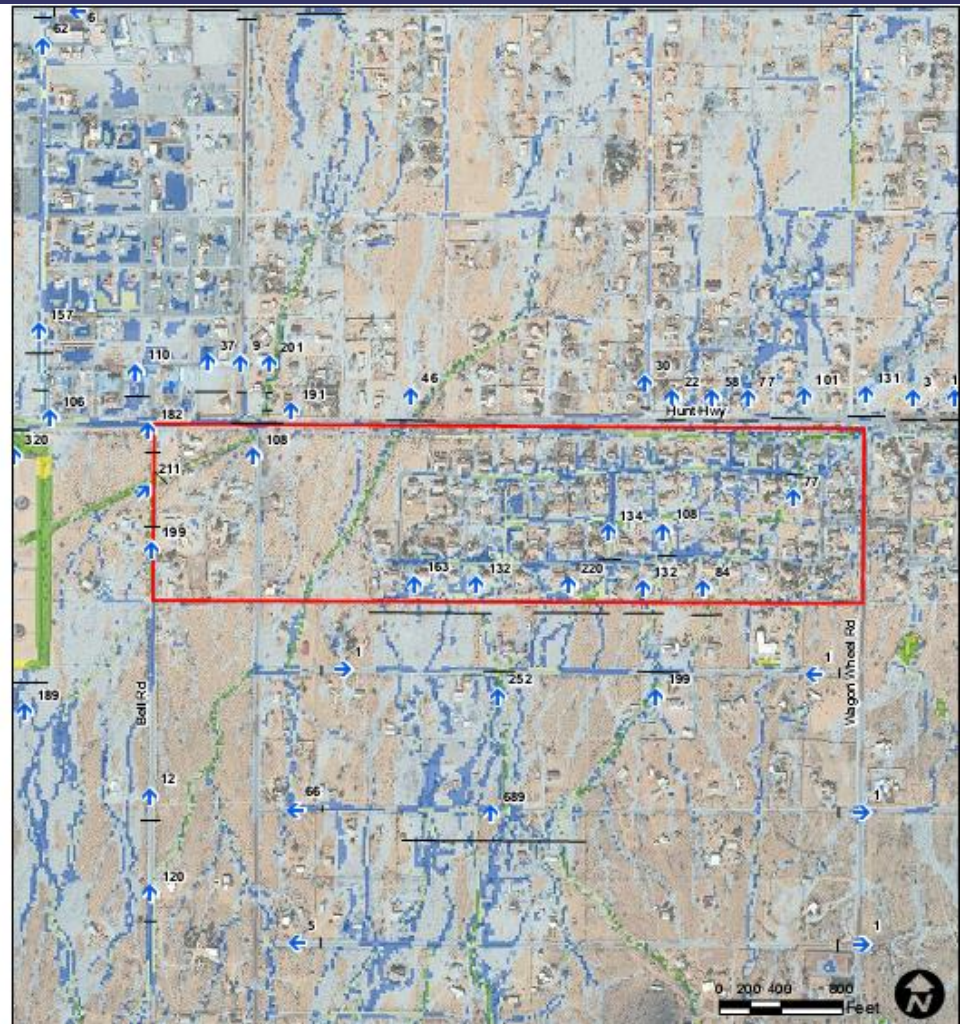

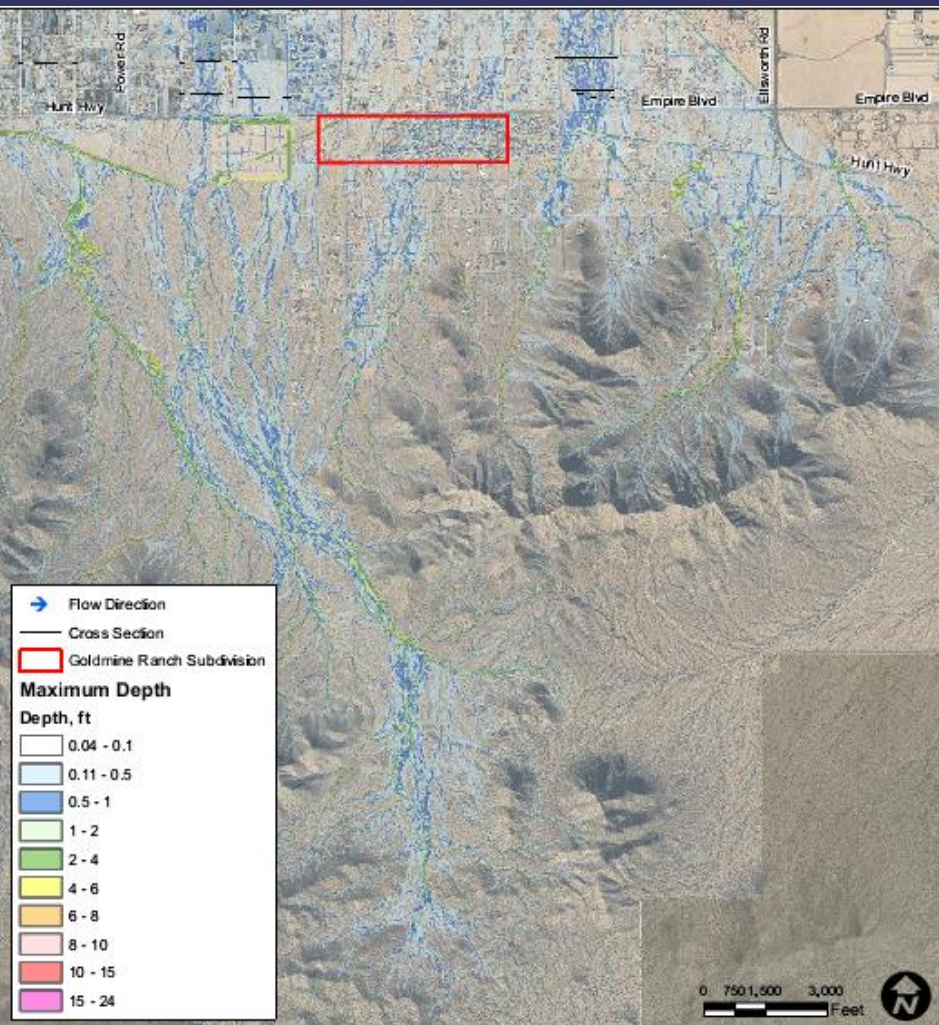

1. Farmer's Dike / Hunt Highway (west)
2. Hunt Highway (east) – Power to Hawes
3. Higley & Coldwater
4. Sossaman & Riggs Rd / Cloud Road Basin
5. Cloud Rd / Power Rd Channels

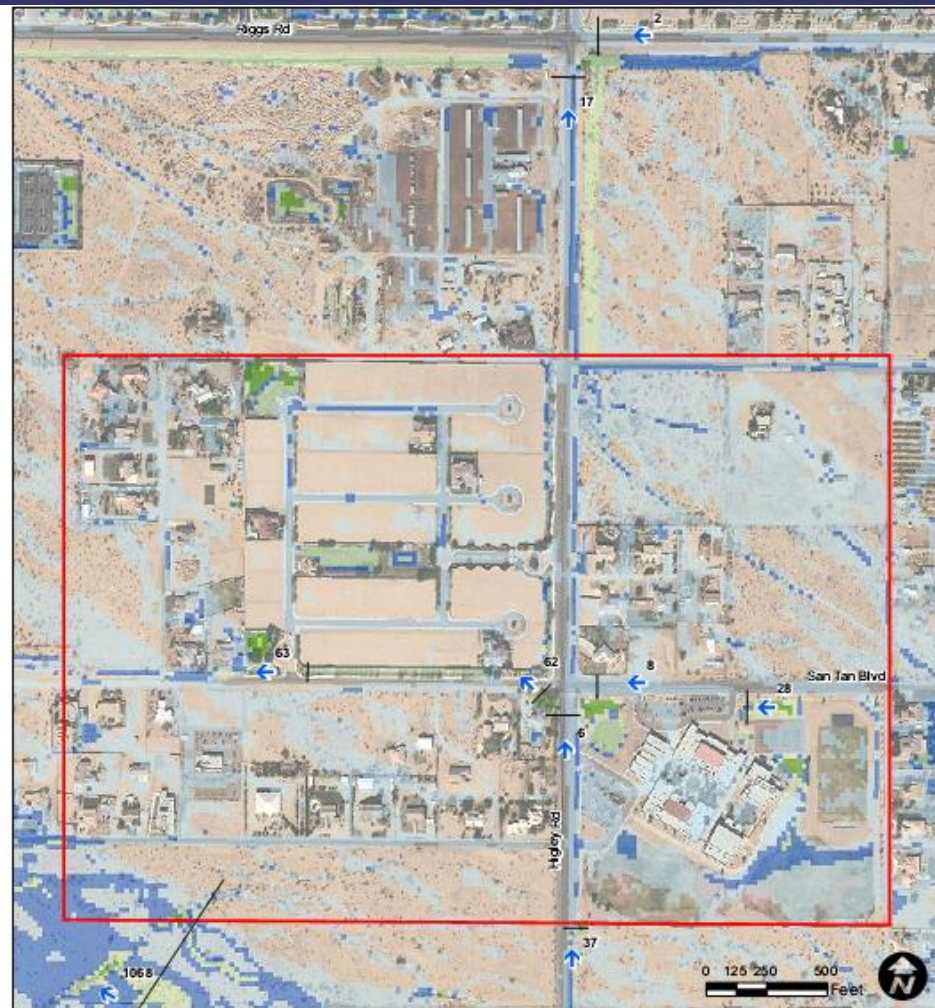

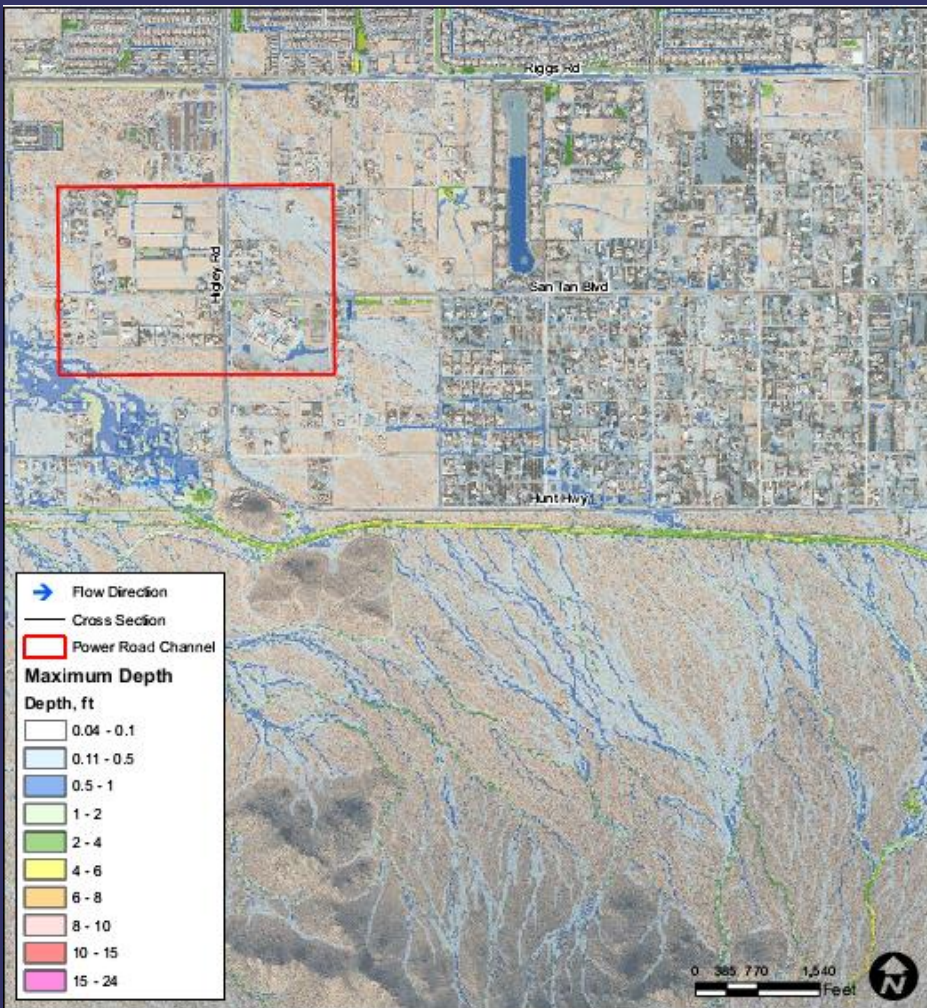

Potential Mitigation Area 1

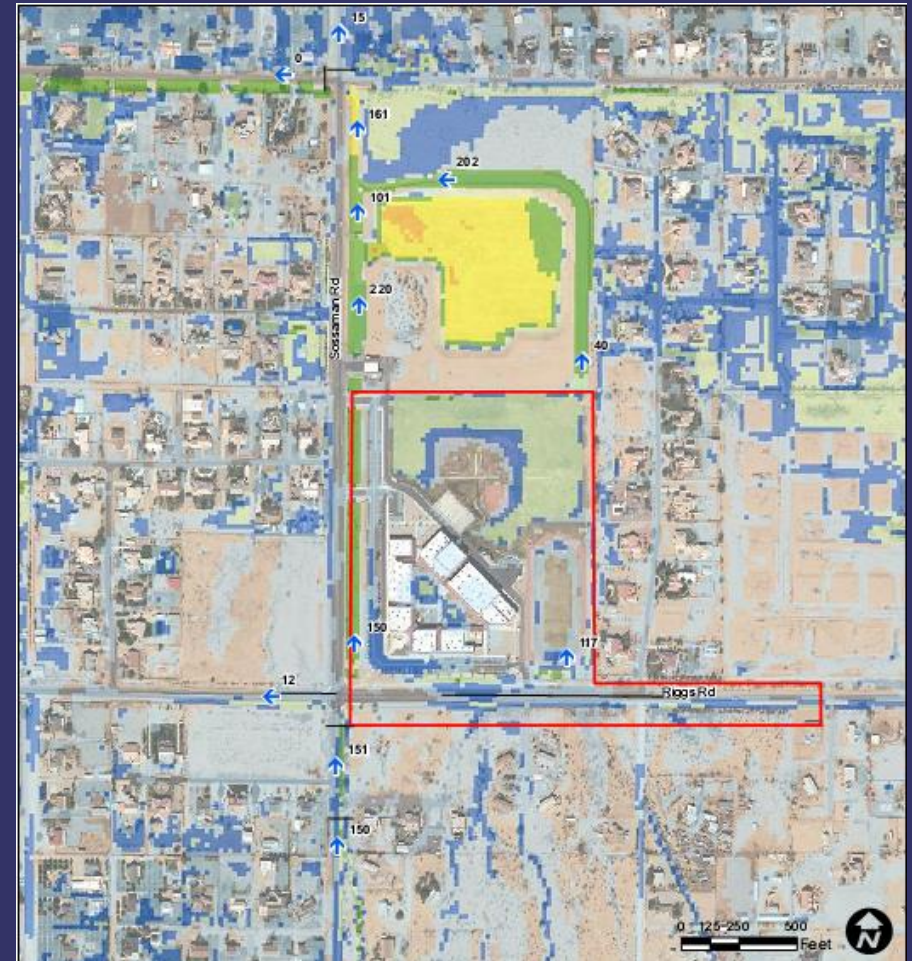

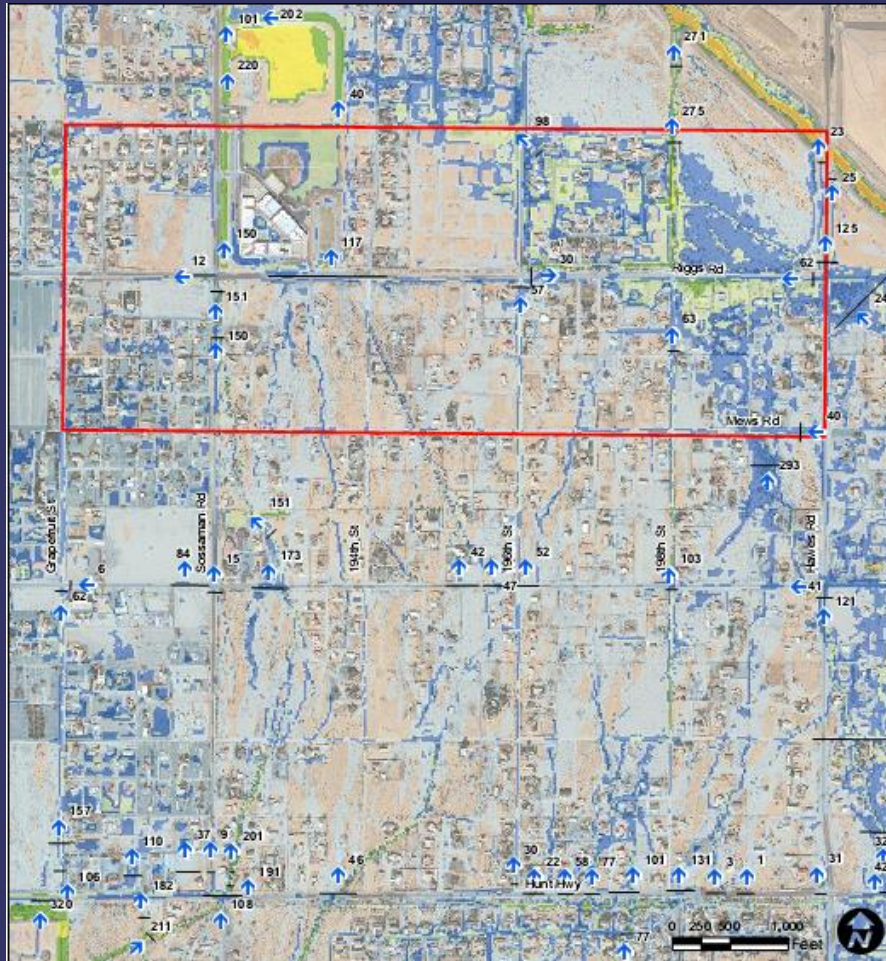

Potential Mitigation Area 2

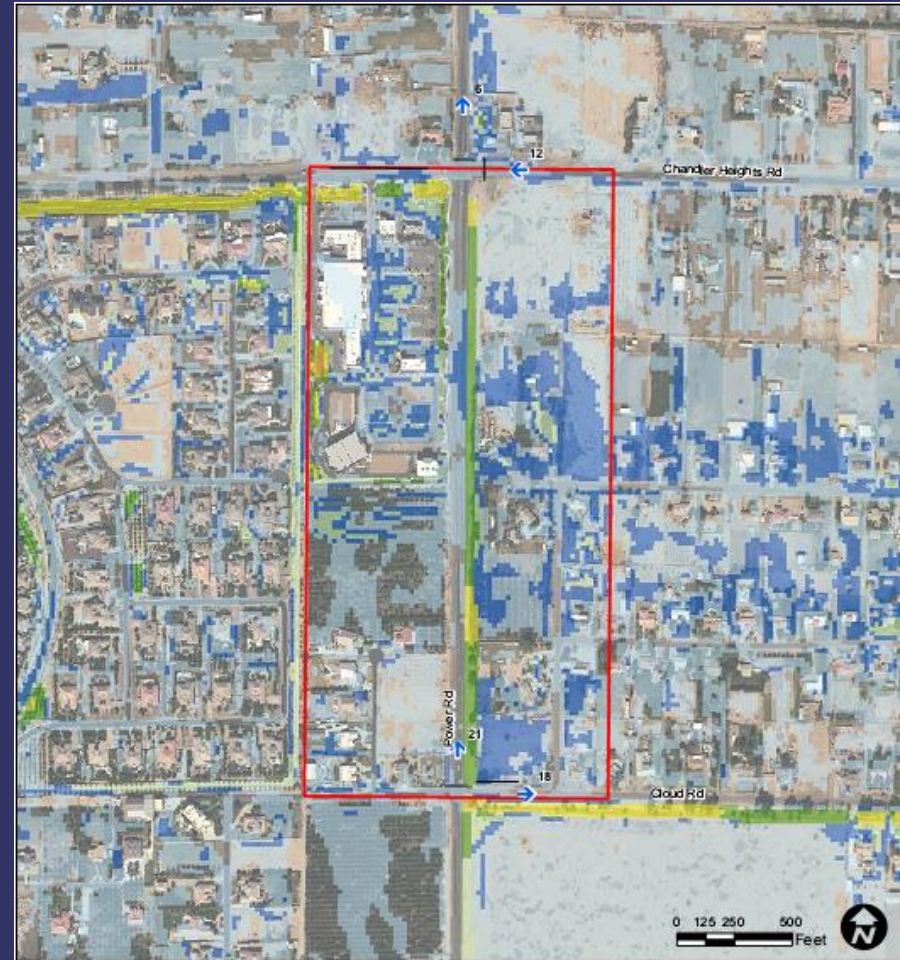

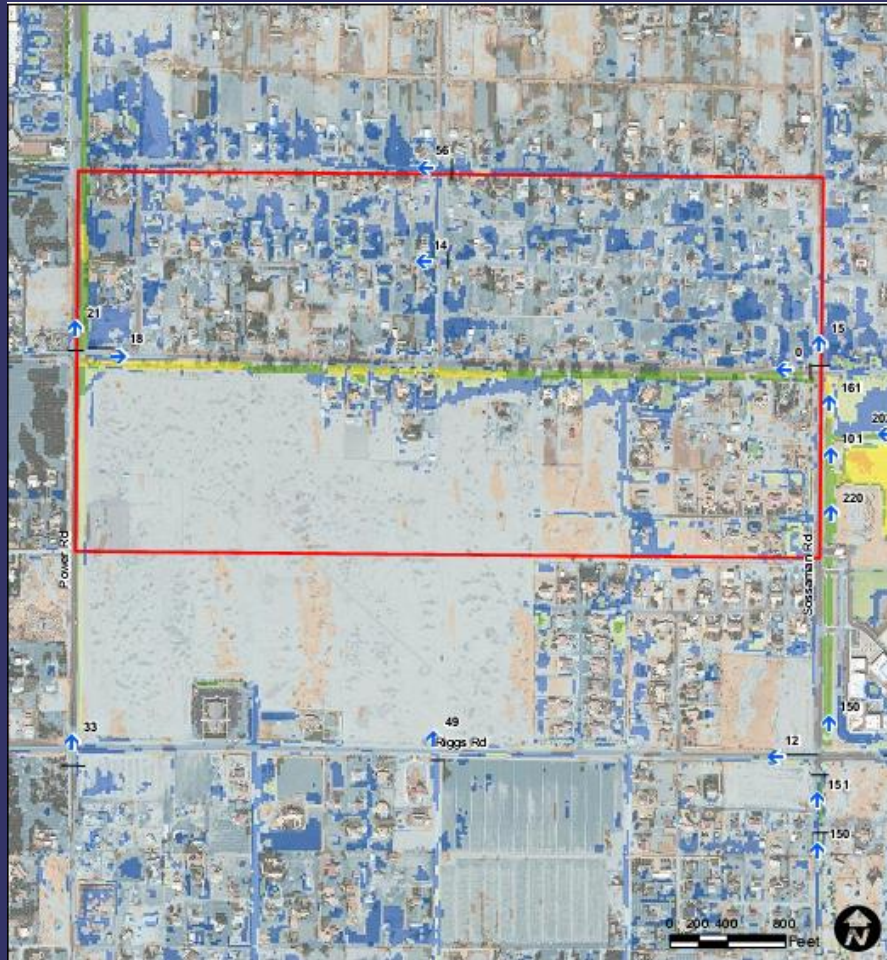

Potential Mitigation Area 3

Potential Mitigation Area 4

Potential Mitigation Area 5

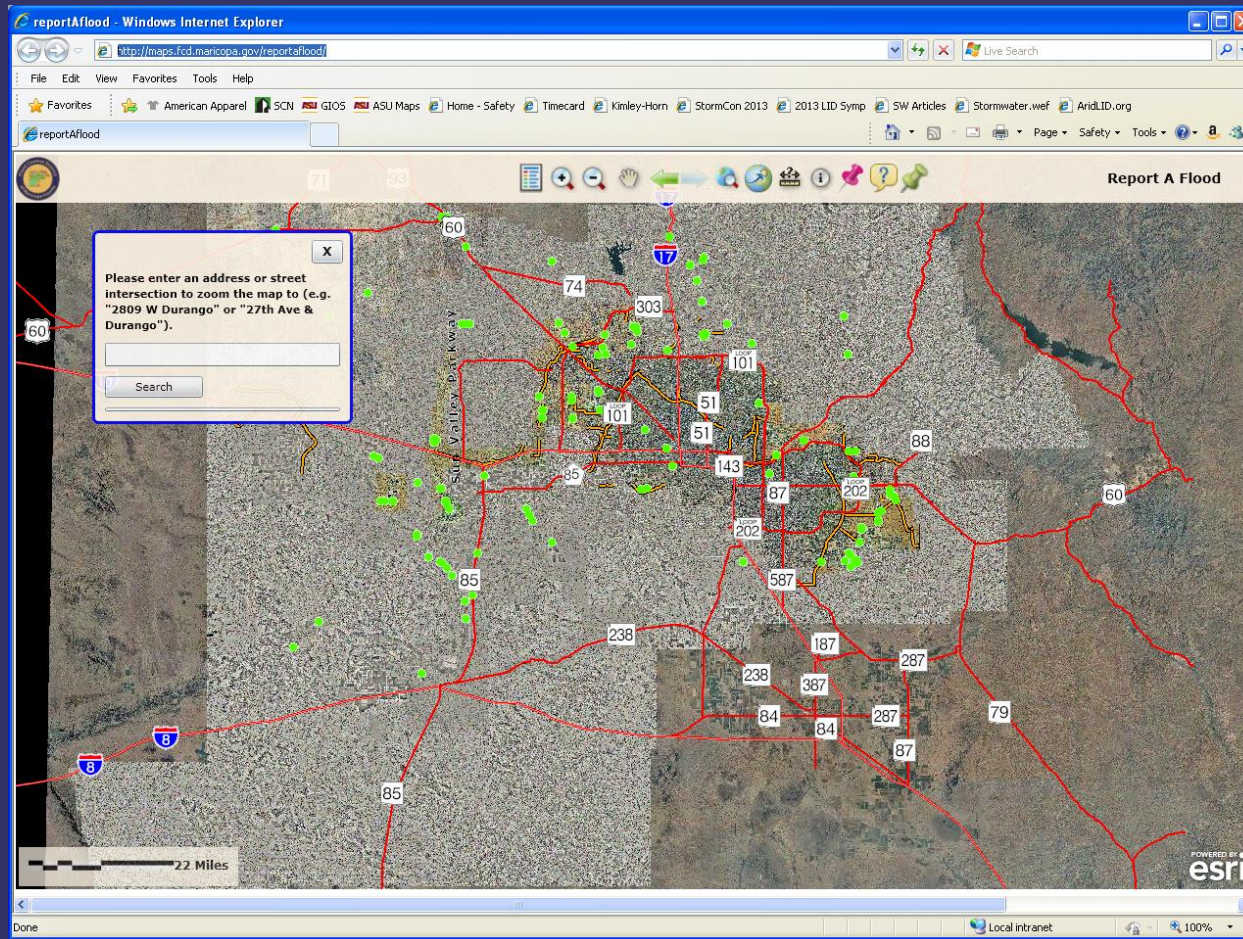

Next Steps

- Document CIP project opportunities
- Complete by Dec 2013
 - Flood Models & Reports
 - Flood Hazard Assessment
- Feasible projects will be submitted for further development

Report A Flood
